PRESS RELEASE

The Ministry of Health and Wellness has obtained the results of 15 sequencing tests done by the Central Health Laboratories.

Out of the **15 samples sequenced, 12 were from inbound passengers from South Africa detected positive for COVID-19 upon their arrival** and **3 samples came from local community infection**.

The sequencing results are as follows:

- **The 12 inbound passengers from South Africa** have tested **positive for the OMICRON variant**. These passengers have been detected positive for COVID-19 upon their arrival in Mauritius and immediately put in quarantine. They have had no contact with the local community.

- **2 samples collected from local community** infection have tested positive for the **Delta variant**.

- **1 sample collected from the local community** has tested positive for the **B.1.1.318 (local) strain**.
